DETAILED ACTION

Response to Amendment

The Amendment, filed on October 19, 2004, has been entered and acknowledged by the Examiner.

Cancellation of claims 1-10 has been entered.

Claims 11-23 are pending in the instant application.

Election/Restrictions

Claims 11-16 and 23 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made without traverse in the reply filed on October 10, 2007.

Claim Objections

Claims 17, 21 and 22 are objected for the following reasons:

Claim 17 recites the phrases "M selected from the group consisting of Mg, Ca, Ba, Sr and at least one element represented by M'...", and "Mn, Fe, Cr, Sn.", the recitations are objectionable since they include grammatical errors by failing to group the different elements corresponding to M and M' with the use of a conjunction term (i.e., "and").

Claim 21 recites the phrases "M is at least one selected from the group consisting of Mg, Ca, Ba, **Sr, M'...**", "Mn, Fe, **Cr, Sn**, 0.0001..." and "Fe, Cl, **Br, Ir**.", the recitations are objectionable since they include grammatical errors by failing to group the different elements corresponding to M, M' and M" with the use of a conjunction term (i.e., "and").

Claim 22 includes essential subject matter enclosed within parentheses. While reference characters corresponding to elements recited in the detailed description of the

10/511,723 Art Unit: 2879

drawings and used in conjunction with the recitation of the same element or group of elements in the claims should be enclosed within parentheses, so as to avoid confusion with other numbers or characters which may appear in the claims, essential subject matter should not be enclosed within parentheses since references enclosed within parentheses do not constitute a limitation. See MPEP § 608.01(m).

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 22 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 22 recites the phrase "and/or", the phrase renders the claim indefinite since the claim terminology should be in the alternative only.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 17-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kamiya (US 2,988,516) in view of Salam (US 2001/0022495).

10/511,723 Art Unit: 2879

Regarding claims 17-19, Kamiya discloses a light emitting device comprising a light emitting element and a phosphor which converts a part of a luminescence spectrum emitted from the light emitting element, wherein the luminescence spectrum of the light emitting element is located between the near ultraviolet region and a short-wavelength visible region (Column 1, lines 9-15), wherein the phosphor is an alkaline earth metal boric halide phosphor (Column 1, line 27) including at least one element represented by M selected from the group consisting of Mg, Ca, Ba and Sr (Mg, Column 1, line 27), and at least one element represented by M' selected from the group consisting of Mn, Fe, Cr and Sn (Mn, Column 1, lines 52-54).

Kamiya fails to exemplify the limitation of the light emitting element being a semiconductor light emitting element. However, in the same field of endeavor, Salam discloses a light emitting device provided with a nitride semiconductor light emitting element, including at least Ga and In/AI, and provided with a fluorescent composition which converts the UV radiation generated by the semiconductor element to a longer wavelength. It is art recognized the advantages of using semiconductor light emitting lamps over fluorescent lamps, such as increase life expectancy of the lamp, lower operating temperatures and lower energy requirements. It would have been considered within the capabilities of one skilled in the art to use the semiconductor light emitting element disclosed by Salam instead of the fluorescent lamp of Kamiya in order to obtain a light emitting device having the general advantages provided by the semiconductor light emitting element. Moreover, given Kamiya's teaching of the known excitation of the alkaline fluoroborate phosphor by UV radiation, one skilled in the art would contemplate using a UV emitting semiconductor light emitting element with a reasonable expectation of success similar to using fluorescent lamp. Thus, it would have been obvious at the time the invention was made to a person having ordinary skills in the art to incorporate the UV semiconductor light emitting element disclosed by Salam in the light emitting device of

10/511,723 Art Unit: 2879

Kamiya in order to obtain a light emitting device with increase life expectancy, lower operating temperatures and lower energy requirements.

Claim 17-19 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hase et al. (JP 55-043101 A) in view of in view of Salam (US 2001/0022495).

Regarding claims 17-19, Hase discloses a light emitting device comprising a light emitting element and a phosphor (25) which converts a part of a luminescence spectrum emitted from the light emitting element, wherein the luminescence spectrum of the light emitting element is located between the near ultraviolet region and a short-wavelength visible region (Abstract), wherein the phosphor is an alkaline earth metal boric halide phosphor (chloroborate phosphor, Table 3, Page 4) including at least one element represented by M selected from the group consisting of Mg, Ca, Ba and Sr (Ca, Table 3), and at least one element represented by M' selected from the group consisting of Mn, Fe, Cr and Sn (Sn, Table 3).

Hase fails to exemplify the limitation of the light emitting element being a semiconductor light emitting element. However, in the same field of endeavor, Salam discloses a light emitting device provided with a nitride semiconductor light emitting element, including at least Ga and In/AI, and provided with a fluorescent composition which converts the UV radiation generated by the semiconductor element to a longer wavelength. It is art recognized the advantages of using semiconductor light emitting lamps over fluorescent lamps, such as increase life expectancy of the lamp, lower operating temperatures and lower energy requirements. It would have been considered within the capabilities of one skilled in the art to use the semiconductor light emitting element disclosed by Salam instead of the fluorescent lamp of Hase in order to obtain a light emitting device having the general advantages provided by the semiconductor light emitting element. Moreover, given Hase's teaching of the known excitation of the alkaline chloroborate

10/511,723 Art Unit: 2879

phosphor by UV radiation, one skilled in the art would contemplate using a UV emitting semiconductor light emitting element with a reasonable expectation of success similar to using fluorescent lamp. Thus, it would have been obvious at the time the invention was made to a person having ordinary skills in the art to incorporate the UV semiconductor light emitting element disclosed by Salam in the light emitting device of Hase in order to obtain a light emitting device with increase life expectancy, lower operating temperatures and lower energy requirements.

Regarding claim 21, Hase discloses a light emitting device wherein the phosphor is represented by a general formula of $(M_{1-x-y}Eu_xM'_y)_2B_5O_9M''$ (Table 3),

where M is at least one selected from the group consisting of Mg, Ca, Ba and Sr, where M' is at least one selected from the group consisting of Mn, Fe, Cr and Sn, 0.0001 \leq x \leq 0.5, 0.0001 \leq y \leq 0.5, and

where M" is at least one halogen selected from the group consisting of F, Cl, Br and I.

Allowable Subject Matter

Claims 20 and 22 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

Regarding claim 20, the references of the Prior Art of record fails to teach or suggest the combination of the limitations as set forth in claim 20, and specifically comprising the limitation of the phosphor is an alkaline earth metal boric halide phosphor activated by at least Mn and Eu.

10/511,723

Art Unit: 2879

Page 7

Regarding claim 22, the references of the Prior Art of record fails to teach or suggest the

combination of the limitations as set forth in claim 22, and specifically comprising the limitation

of further comprising a phosphor selected from the group of phosphors stated in claim 22.

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner

should be directed to Mariceli Santiago whose telephone number is (571) 272-2464. The

examiner can normally be reached on Monday-Friday from 9:30 AM to 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Nimesh Patel, can be reached on (571) 272-2457. The fax phone number for the

organization where this application or proceeding is assigned is (571) 273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about PAIR system,

see http://pair-direct.uspto.gov. Should you have questions on access to Private PAIR system,

contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
